UV LASERSKO
GRAVIRANJE

UV LASER
ENGRAVING

UV LASERSKO GRAVIRANJE

Tražite li precizno i nježno graviranje za osjetljive materijale? UV lasersko graviranje je idealno rješenje. Naš laserski UV stroj za graviranje koristi ultraljubičasto (UV) svjetlo kako bi postigao iznimnu preciznost i detalje bez oštećenja materijala topline.

Za razliku od tradicionalnih laserskih strojeva, UV laser koristi "hladni" proces, što znači da minimalno utječe na temperaturu materijala tijekom obrade, čime se izbjegava toplinsko oštećenje, deformacija ili promjena boje. Ova karakteristika čini UV lasersko graviranje savršenim izborom za preciznu obradu širokog spektra osjetljivih materijala kao što su: METALI / PLASTIKA / STAKLO / KERAMIKA / DRVO / TEKSTIL / KOŽA...

UV LASER ENGRAVING

Are you looking for precise and gentle engraving for delicate materials? UV laser engraving is the ideal solution. Our laser UV engraving machine uses ultraviolet (UV) light to achieve exceptional precision and detail without damaging the material with heat.

Unlike traditional laser machines, the UV laser uses a "cold" process, which means that it minimally affects the temperature of the material during processing, thus avoiding thermal damage, deformation or discoloration. This characteristic makes UV laser engraving the perfect choice for precise processing of a wide range of sensitive materials such as: METALS / PLASTIC / GLASS / CERAMICS / WOOD / TEXTILES / LEATHER...
